Leaflet Ref: Rad 012
Version: 10
Leaflet title: Isotope Scanning
Date Produced: June 2025
Expiry Date: June 2027

What is an isotope scan?

An isotope scan is a test in which a small amount of radioactivity is injected into the body, usually into a vein in the arm.

This is then used to obtain a series of scan pictures of different organs.

There are no side effects to this.

After the injection you may have to wait before the scan pictures are taken. This will depend upon which area of the body is to be scanned.

If your appointment letter states that you will have a wait of over an hour, you will be able to leave the department during this time.

You may eat and drink normally unless your letter states otherwise.

Benefit of scan

This scan will provide information, which along with the results of other tests you may have had, will help your doctor with your diagnosis.

Alternatives

This scan is not like an ordinary x-ray. The information we obtain will show how your body is functioning. None of the other types of scan or x-rays provide functional information.

Risks

The risks are negligible. A small amount of radiation is injected, but with modern imaging equipment this is kept to a minimum. The benefits of the information gained outweigh any risk.

Common questions

Is the radiation dangerous?

No, the amount of radiation received is very small, usually no more than a normal x-ray examination. It will disappear from the body naturally after a few hours.

Do I need to stop taking my medication?

For most tests there is no need to change any regular treatment. Your doctor will inform you if you do need to stop taking your medication.

Will I be going into a tunnel?

To take good quality scan pictures the camera does have to be close to the body, but you do not have to go into a tunnel.

How long before I get my results?

The scan results will be sent to your consultant, usually within two weeks.

Contact information

For any further queries contact us on **01942 822421**. Our opening hours are 8:30am until 5pm, Monday to Friday.

Comments, Compliments or Complaints

The Patient Relations/Patient Advice and Liaison Service (PALS) Department provides confidential on the spot advice, information and support to patients, relatives, friends, and carers.

Ask 3 Questions

Become more involved in decisions about your healthcare. You may be asked to make choices about your treatment. To begin with, try to make sure you get the answers to three key questions:

1. What are my options?
2. What are the positives and negatives of each option for me?
3. How do I get support to help me make a decision that is right for me?

How We Use Your Information

For details on how we collect, use, and store the information we hold about you, please see patient information leaflet, Ref. **Corp 006** How we use your information, this can be found on the Patient Information Leaflets page on the Trust website, see details on the front cover.

This leaflet is also available in audio, large print, Braille, and other languages upon request. For more information, please ask in the department/ward.
