Advice following injection:

1. You may have a small plaster covering the injection site. This can be removed after 24 hours, but do not worry if it falls off sooner.
2. Please keep an eye on the injection site for any untoward effects such as increased redness, swelling, significant increased pain, prolonged numbness and/or loss of sensation.
3. The area may become a little bruised after the injection and you may experience a short-term increase in the level of your pain. This is normal and will usually resolve within 24-48 hours. You may find taking painkillers beneficial. A small percentage of patients may experience an increased level of pain for much longer.
4. Depending on the type of injection you receive, you may be advised either to rest the area for 24 to 48 hours or to mobilise the joint, as advised by your doctor.

Should you be concerned about any of the above, please do not hesitate to contact the Ward.

Ask 3 Questions

Become more involved in decisions about your healthcare. You may be asked to make choices about your treatment. To begin with, try to make sure you get the answers to three key questions:

1. What are my options?
2. What are the positives and negatives of each option for me?
3. How do I get support to help me make a decision that is right for me?
