Ask 3 Questions

Become more involved in decisions about your healthcare. You may be asked to make choices about your treatment. To begin with, try to make sure you get the answers to three key questions:

1. What are my options?
2. What are the pros and cons of each option for me?
3. How do I get support to help me make a decision that is right for me?

How We Use Your Information

For details on how we collect, use and store the information we hold about you, please take a look at our “how we use your information” leaflet which can be found on the Trust website:

http://www.wwl.nhs.uk/patient_information/leaflets

This leaflet is also available in audio, large print, braille and other languages upon request.
For more information please ask in department/ward.

Acupuncture

Musculoskeletal Physiotherapy Department

Patient Information

Author ID: EB
Leaflet Number: CM 177
Version: 1
Name of Leaflet: Acupuncture
Date Produced: December 2019
Review Date: December 2021

What is acupuncture?

Acupuncture is a health technique that is used mostly for pain relief.

Very fine sterile needles are placed into your skin to stimulate certain points in your body.

How does acupuncture work?

It works by changing how your brain and spinal cord deals with pain.

How will acupuncture help me?

Acupuncture is used to complement other forms of treatment.

It is also used to reduce muscle spasm and inflammation.

It may also be used to treat other problems such as:

- Skin conditions
- Asthma
- Hay fever
- Anxiety
- Depression
- Stomach & bowel problems
- Headaches & migraines.

Who will carry out the treatment?

Your physiotherapist will carry out the treatment.

Your physiotherapist is a qualified health professional who has completed acupuncture training.

What should I do before my acupuncture treatment?

It is important that you eat something before coming to your appointment.

Your physiotherapist will ask you to sign a consent form before you start the acupuncture treatment. This is to confirm that you understand the procedure and any possible side effects.

Please tell your physiotherapist if you:

- Are allergic to metal
- May be pregnant
- Have epilepsy or diabetes
- Have a cold or are generally feeling unwell
- Have a heart condition or low blood pressure
- Are taking tablets to thin your blood
- Suffer from haemophilia or have a bleeding disorder
- Have a problem with your immune system.

What happens during the treatment?

The physiotherapist will insert one to ten sterile needles into your skin in the area of pain. During the treatment your physiotherapist will turn the needles. This is to increase the effectiveness of the treatment.

Your physiotherapist will leave the needles in place for around 20 minutes.

It is normal to feel an ache, warmth or a tingling sensation during the treatment. Please tell your physiotherapist if they become too strong.

Your physiotherapist will remove the needles at the end of the treatment and dispose of them safely.

You may need to rest for a few moments at the end of the treatment.

Is acupuncture safe?

Acupuncture is very safe. The needles we use are sterile single use needles. They will only be used to treat you then disposed of safely.

What are the possible side effects?

Side effects after the acupuncture treatment tend to be mild and do not last long.

They can include:

- Tiredness
- Thirst
- Becoming light-headed
- An increase in ache
- Bleeding/bruising.

How many sessions of acupuncture will I need?

The physiotherapist will provide up to six acupuncture sessions.
